

Elian Gerard

Frontend Engineer: React, Next.js, TypeScript

Chihuahua, Mexico (UTC-6)

eliangerardiso@gmail.com · eliangerard.com · linkedin.com/in/eliangerard · github.com/eliangerard

Frontend engineer with 2+ years building AutoZone's e-commerce storefronts (React, Next.js, TypeScript) for the US, Mexico and Brazil. One of 3 frontend engineers on Customer Reviews, which grew review submissions more than 5x. I also run two products of my own on Cloudflare Workers, built mostly with Claude Code. Working hours overlap with US time zones.

Experience

Systems Engineer (Frontend), AutoZone

Jun 2024 – Present

Progression: IT Intern (Jun 2024), Associate Systems Engineer (Aug 2024), Systems Engineer (Mar 2026).

- Built Customer Reviews as one of 3 frontend engineers and set its build order and integration plan. Launched in the US, then Mexico. Submissions grew more than 5x year over year.
- Rebuilt the review form to make adding text, photos and videos easier. Review quality (written content, photos and videos) rose about 40%. Both figures come from AutoZone's business analytics team.
- Started a legacy cleanup unprompted: rewrote post-sign-in redirects across 70+ files and began moving state management from Redux to TanStack Query (in progress).
- Received AutoZone's Extra Miler award (May 2026) for teamwork and the legacy cleanup.
- Mentored an intern. Review pull requests and help interns and associate engineers on other teams.
- Run A/B tests in Monetate and Forte, manage feature flags and translated labels in Oracle ATG BCC, and take part in releases, production fixes and troubleshooting calls with third-party vendors.
- Ship features from Figma designs that are responsive, ADA-compliant and covered by Jest and React Testing Library tests, working with Product and Design in a Scrum team and in annual planning.

Stack: React, Next.js, TypeScript, TanStack Query, Redux, Jest, React Testing Library, Claude Code

Independent Developer, Personal Products (Orablo, Vinqua)

Jul 2026 – Present

Built mostly with Claude Code under my direction. I decide what to build and how, and ship it.

- Orablo (orablo.com) teaches pronunciation in 6 languages on web and Android (Capacitor), grading speech in the browser with the Web Speech API and an on-device Vosk fallback. Daily lessons are drafted with the Claude Agent SDK and gated by a separate LLM judge. Next.js 16 and Tailwind CSS on Cloudflare Workers (D1, KV, R2).
- Vinqua (vinqua.com) builds a free VIN report from 8 NHTSA and EPA endpoints, streamed section by section with React Suspense. A two-layer cache lets different VINs share lookups.

Full-Stack Developer, Freelance (TintoTenis, Por Amor a Tobby)

Dec 2023 – Apr 2025

- Built full-stack apps for two clients: a platform a tennis academy uses for class management, payments and reporting, and an adoption platform for animal shelters (poramoratobby.com). Owned the database schema, REST API design and deployment (React, Express, MySQL).

Skills

Frontend: React, Next.js (App Router), TypeScript, JavaScript, HTML, CSS, Tailwind CSS, TanStack Query, Redux, responsive design, accessibility (ADA), A/B testing

Backend and cloud: Node.js, Express, REST APIs, Cloudflare Workers, Google Cloud Platform (GCP), SQL (MySQL, SQLite/D1)

Testing and tooling: Jest, React Testing Library, Vitest, ESLint, GitHub Actions (CI), Git, Figma, Scrum

AI: Claude Agent SDK, LLM-as-judge evaluation, AI-assisted development (Claude Code)

Education

Bachelor of Engineering in Computer Systems Engineering, Tecnológico Nacional de México Aug 2020 – Dec 2024

Certifications

Professional Cloud Architect, Google Cloud

Sep 2026

Associate Cloud Engineer, Google Cloud

Jan 2026

Languages

Spanish (native), English (C1, EF SET certificate: cert.efset.org/6kiCzb)
